                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as
                                                                                                                                                                     arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (bases 1 to 143079)

NOTE: This is a 'working draft' sequence. It currently
* consists of 7 contigs caps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.

* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 100875 100874: contig of 56174 bp in length

4 NOTE: This is a 'working draft' sequence. It currently
5 consists of 33 contigs. The true order of the pieces
5 is not known and their order in this sequence record is
5 arbitrary, Gaps between the contigs are represented as
5 runs of N, but the exact sizes of the gaps are unknown.
5 This record will be updated with the finished sequence
6 as soon as it is available and the accession number will
7 be preserved.

*.NOTE: This is a 'working draft' sequence. It currently
* consists of 47 contigs. The true order of the places
* is not known and their order in this sequence record is
* arbitrary. Gass between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

                                                                                      Percent
                                                                                                                                                                                            The chicken CHD-W gene (AAT42754) acting alone or in conjunction with the closely related CHD-1A gene (AAT42751) is suggested to initiate female development in birds. The sequence of CDH-W was deduced from 2 clones isolated from a 10-day chick embryo library using a fragment of the CHD-1A gene as a probe. The CHD-W gene is located on the W chromosome. Probes based on CHD-W and CHD-1A give a W chromosome-specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-W nucleic acids can also be used to control the sex of progeny of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gallus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bird; sex determination; chromodomain-Helicase-DNA binding 1 Avian; CHD-W; chromodomain-Helicase-DNA binding on the W chromosome; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           library using a great tit CHD-W sequence (see also AAT42755) as probe. The CHD-1A (A = AVian) gene shows close identity to the mouse CHD-1 gene (see also AAT42756-57). It is located on an autosome or chromosome. Probes based on CHD-W and CHD-1A give a W chromosome-specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-1A nucleic acids can also be used to control the sex of the progeny of a bird.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bird; sex determination;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The chicken CHD-W gene (AAT42754) acting alone or in conjunction will the closely related CHD-1A gene (AAT42751) is suggested to initiate female development in birds. The sequence of CDH-1A was deduced from 3 clones isolated from a stage 10-12 chicken embryo CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Avian chromodomain-helicase-DNA binding genes determine sex
birds - used for sex determn. and to control sex of progeny
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 1997-043127/04.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                17

                                                                                                                                                                                           The altered vertebrate telomere repeat binding protein (A-TRF) has a telomere repeat binding factor (RFF) dimerisation domain, and forms a hetero-dimer with TRF, preventing it from binding to the specified repeat sequence. A-TRF, optionally expressed by gene therapy, is used to inhibit shortening of telomeres associated with ageing (for cosmetic purposes) and disease, e.g. ataxia telangeictasia, Down's syndrome, atrophy of the skin, age-related macular degeneration, atherosclerosis, tumours and viral (including human immune deficiency virus) infection. Cells expression of recombinant proteins or where intended for subsequent transplant or for testing, eliminating the need for transformation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4080 ATTTTACCTGATGATCCAGACAAGAAACCCCAGGCAAAGCAGCTACAGAC 4129

                                                                                                                                                                                                                                     Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-1A (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (AAT42759) and and the great tit CHD-W gene (AAT42759). Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42754) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.

                                                                                Percent Similarity:
                                                                                                                                                                                                                                                                                                Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-1A (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (see also AAT42758) and the great tit CHD-W gene (see also AAT42759). Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42754-55) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Chick CHD-1A gene fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 102

                                                                                                                Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-1A (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (AAT4758) and and the great tit CHD-W gene (AAT42759). Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42755) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.

                                                                                                                                                                                                                                                                                                                capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLG1676-ABL16011), expressed DNA sequences (ABLG1840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; SEQ ID NO 13811; 21pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4205 AAGCCCCAGGCCAAGCAGCTGCAGACGCGTGCC 4237
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventi useful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Drosophila melanogaster expressed polynucleotide SEQ ID NO 13808

These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicits, Hirschisprung's disease, chronic colitis or ulcerative colitis. The present sequence is a cDNA encoding a digestive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders of the digestive system, particularly cancer and cancer metastases - \frac{1}{2}
                                                                                                                                                                                                                                                                                                                                                                                         Sequence 421 BP; 148 A; 78 C; 127 G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 1198; 986pp; English.

Human secreted CC proteins have activities based on the tissues and cells the genes are CC expressed in. Examples of activities include: immunosuppressive; cardiant; CC vasotropic; cerebroprotective; antiproliferative; cytostatic; cardiant; CC vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; CC vasotropic; cerebroprotective; nootropic; neuroprotective; antipacterial; CC vasotropic; cerebroprotective; nootropic; neuroprotective; antipacterial; CC vasotropic; cerebroprotective; notropic; neuroprotective; antipacterial; CC vasotropic; cerebroprotective; nootropic; neuroprotective; antipacterial; CC vasotropic; cerebroproteins can be used to prevent, treat or ameliorate CC condition or susceptibility to a pathological condition. Disorders which CC are diagnosed or treated include autoimmune diseases e.g. remanatoid CC carthritis, hyperproliferative disorders e.g. neoplasms of the breast or CC liver, cardiovascular disorders e.g. cardiac arcest, cerebrovascular CC disorders e.g. cerebral ischemia angiogenesis, nervous system disorders c.g. arthritis, hyperproliferative disorders e.g. cardiac arcest, cerebrovascular CC disorders e.g. cerebral ischemia angiogenesis, nervous system disorders c.g. arthritis, hyperproliferative corneal infection. The proteins can also be used to aid wound healing and epithelial cell proliferation, to corneal infection of the present storage capabilities. Acc99009 to Acc99817 and Aab56076 represent sequences used CC capabilities. Acc99009 to Acc99817 and Aab56076 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqn-emb1/NA2001B.DAT:AAS96223

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotides encoding bone marrow ctissue polypeptides. The sequences of the invention can be used in the Ct treatment of central nervous system disorders such as Parkinson's ct reatment of central nervous system disorders such as parkinson's ct disease, Alzheimer's disease, Huntington's disorders and amyotrophic constraints, peripheral nervous system disorders such as peripheral central solerosis, peripheral nervous system disorders such as peripheral constraints, bone degenerative disorders, periodontal constraints, such as stroke, viral infections, forgal infections, autoimmune disorders such as croit at infections, fungal infections, autoimmune disorders such as croit such as croit such as croit such as croit such as contraints, multiple sclerosis, asthma and eczema, inflammatory cd disorders such as croit's disease and nephritis, hyperproliferative colorary, kidney, brain and skin). The sequences are also useful in bone, cartilage, tendon, ligament and/or nerve tissue growth or regeneration can din healing of wounds, burns, incisions and ulcers. Sequences are associated in healing of wounds, burns, incisions and ulcers. Sequences are associated in healing of wounds, burns, incisions and ulcers. Sequences conserved the properties of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Align seg 1/1 to: AAS96223

                                                                                                                                                                                                                                                                                                                                                                                                           amyloid precursor protein (APP) to beta-amyloid, and also in cleavage of cother membrane proteins such as Notch (implicated in development of the nervous system); N'terminal signal peptides; C'terminal propeptides; generation of peptides for presentation in the context of major histocompatibility complex molecules, and cleavage of the endoplasmic reticulum stress sensor protein Irel. (I), also nucleic acid (II) that encodes it, and its inhibitors and antibodies (Ab) are used to treat or diagnose diseases that are associated with cleavage of amyloid precursor protein, especially Alzheimer's disease, aberrant breakdown of tydrophobic signal peptides, or accumulation of unfolded proteins in the endoplasmic reticulum. They can also be used to modify presentation of hydrophobic peptides by histocompatibility complex molecules, in cases of e.g. viral infection, cancer and transplant rejection. This sequence encodes the human aspartate protease psl 5 which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                         Quality: 8.00

XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides, PT metastasis.

XX Nucleic acids encoding human immune/hematopoietic antigen (I) control of the sequences given in AAM82170 to AAM91921. (I) have cytostatic control of the production of the production. (I) control of diseases associated with inappropriate (I) expression. For control of the activity of (I) by expressing inactive production of control of the activity of (I) by expressing inactive proteins or to control of the activity of (I) by expressing inactive proteins or to control of the activity of (I) by expressing inactive proteins or to control of the activity of (I) by expressing inactive proteins or to control of the activity of (I) by expressing inactive proteins or to control of the activity of (I) by expressing inactive proteins or to control of the proteins and polynucleotides may be used to produce the secreted (I), by inserting contein. (I) proteins and polynucleotides may be used to produce the secreted (I), by inserting conteins and cancer metastases of heematopoietic delived cells. AAK64703 to AAK87694 represent immune/haematopoietic antigen genomic concers and cancer metastases of heematopoietic antigen genomic concers and the present invention. AAK5492 and AAM82169 concers and the present invention. AAK5492 and AAM82169 concers and the present invention. AAK5492 and AAM82169 concers and the present invention. AAK5490 and AAM82169 concers and the present invention. AAK5490 and AAM82169 concerns and polynucleotides may be used to present invention.
